

**Addendum 1**  
**March 12, 2015**

**RE:** Bid 7930 Annual Ditch Maintenance

**Submit no later than** March 19, 2015, 2:00 pm. Exactly Pacific Local Time

- 1. I am wondering who is providing erosion control. If contractor, what type would you like to see meaning straw, hay or hydro seed. Do you have a map of locations? Also I am wondering if you have any recommendations for dump sites.**

**Answer:** City staff will provide erosion control. It is the Contractor's responsibility to meet all State, Federal and Local laws and regulations regarding hauling and disposal of material. It is the sole responsibility of the Contractor to haul and identify the appropriate disposal location.

- 2. Plans and or a map regarding this project are not posted on the Builders Exchange of Washington website for review. Please send or make available these documents at your earliest convenience.**

**Answer:** The work locations are provided to the Contractor after the City of Shoreline staff conducts city-wide inspections. This year's inspections have not been completed. The annual quantities indicated on the Bid Proposal Sheet, page two is an average, "The annual quantities are estimated, the actual linear feet of restoration, hours of flagging and amount of material to dispose may be more or less." As a result, there is no map for the work projected.

The work will be completed per the City of Shoreline standard plans #205, Shoulder Treatment. This plan is attached.

3. **We have the following questions. Historically, the City of Shoreline has provided the traffic plan for flagging services when flagging was required. Is that the case with Bid 7930?**

**Answer:** The Contractor must develop a Traffic Control Plan and this Plan must be approved prior to work being performed. It is the Contractor's responsibility to determine when traffic control is required and for providing all traffic control services per MUTCD standards.

4. **Is the annual quantity for the "Haul and disposal of ditch material that is displayed at the 60 Yard mark a minimum amount?**

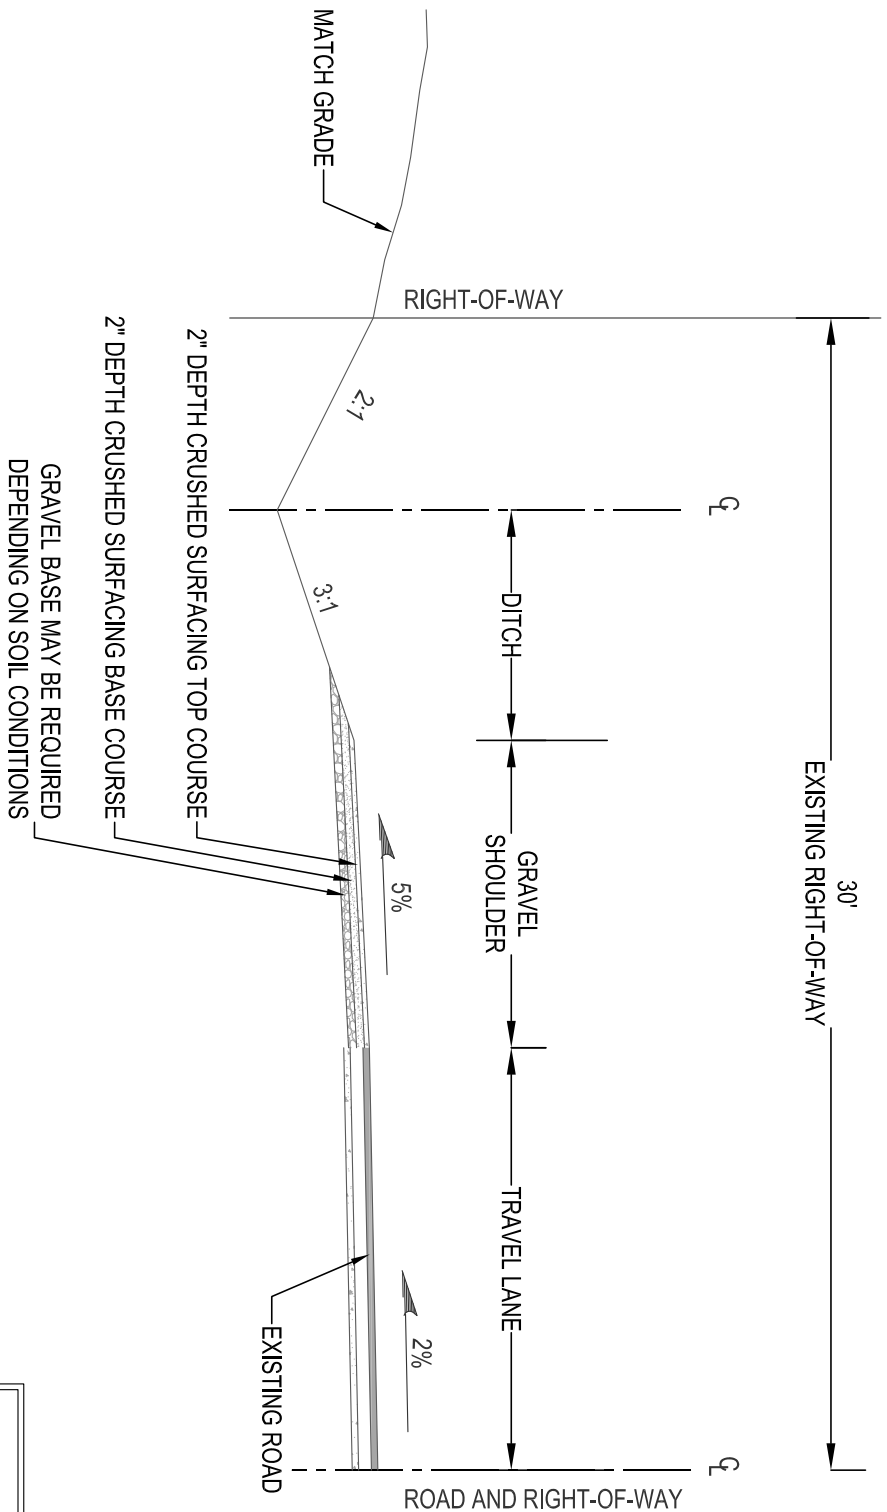

**Answer:** No, sixty (60) yards is not a minimum amount. It is an estimation of the amount of disposal material that may be produced from 7,000 Linear Feet of ditch restoration. The Annual Quantities in the table called Schedule A was developed as estimation of about how much work will be required each year. All Bidders will enter their unit price for each bid item and multiply it times the Annual Quantity amount. This will provide a Total Amount for each bid item as well as a total cost for the City to use when identifying the low bidder.
